Science Concentration

This concentration will prepare future teachers to specialize in science teaching. Students are strongly encouraged to take courses from at least two different disciplines, e.g., BIOL, CHEM, GEOL, and PHYS, etc.

Complete a minimum of nine science units: at least three of the nine units must be upper division; at least one of the courses must have a laboratory component; two of the courses must be three units; one can be four units. Consider choosing one Upper Division General Education Area B (UDGE-B) course.
